

ABSTRACT

An improved aerial work apparatus of the type having an aerial work platform attached to the distal end of a boom mounted to a mobile chassis comprising a material-handling device mounted with respect to the platform. Preferably, the material-handling device is either a dual winch device, a fork lift device, or material support feet. An aerial work platform comprising a rail support frame attached to the boom and a work basket is provided wherein the work basket can be interchanged between a basket in front of the boom and a basket positioned alongside the boom.
